Foster Bridge
Background

In 1923 a wooden footbridge crossed the Duwamish River connecting the Foster Peninsula with Foster Avenue at Tukwila. That bridge was replaced by a 176 foot wood Howe truss bridge in 1939. Cost of construction in 1939 was \$15,865.

After serving the residents and businesses for 41 years the old timbers failed and collapsed May 8, 1980 under the weight of a semi-trailor and tractor.

Community leaders, the City of Tukwila and King County developed a funding package to replace the bridge and continue service to the Foster peninsula. The new bridge cost estimate is \$1,446,395. This is shared 80 percent from federal bridge replacement funds, and 10 percent equally from Tukwila and King County.

Project Description

The bridge will be a concrete box girder construction 34 feet wide (28 foot roadway, 6 foot sidewalk) and 244 feet long. It will be shifted slightly in order to improve the west approach to the intersection with Interurban Avenue South at 52nd Avenue South. Approach roadways will be two 12-foot through lanes paved with asphalt concrete. Curbs, gutters, and sidewalks will be constructed on the west side of 56th Avenue South. A 4-foot wide paved shoulder will be constructed on the east of 56th Avenue South. Signing and striping will be by county forces.
